- Four Leaf Rover Sea-Safe Oil

- Animal Essentials Calcium
- Pet's Friend Eggshell Calcium
- Four Leaf Rover Better Bones
-
- Four Leaf Rover Guts & Glory

- Green Juju frozen veggies
- Primal Fresh Toppers

- Answers Goat Milk
- Primal Goat Milk

PREPARED RAW DIETS AT DEXTER'S

The key to health is VARIETY. Rotating between at least three different meats and three different brands will ensure the variety needed for optimum health.

Dexter's Premium Select

Our own food is locally made to order for us using human-grade ingredients. All of the meats (86% for dogs, 95% for cats) are regionally sourced except Duck. The veggies are fresh and local (except the frozen wild blueberries). The calcium supplement is made from Icelandic seaweed. All of the dog formulas include stomach grass from pastured local beef (the "green" in green tripe that's full of beneficial enzymes), as well as Vitamin E and coconut oil. Cat formulas include psyllium husk for healthy bowel movements.

Smallbatch Pets

Made with human-grade meats and organic produce. Batch formulas contains muscle meat, bone, organs, vegetables (10-20% for dogs, 1% for cats), and extras like apple cider vinegar, bee pollen, & kelp. Designed to be nutritionally complete when fed in a rotation diet. Blend formulas are available as only meat/organ/bone, or as meat/organ/bone with veggies, and are excellent for customizing but need added supplementation when fed exclusively. *Uses bacteriophages to protect against pathogenic bacteria.*

Raw Bistro

This is a complete diet made in Minnesota from regionally sourced ingredients. They work with family farms that embrace sustainable practices and humane animal care. Their beef and bison are grass-fed/finished and the poultry is pastured. The vegetables are organic. They encourage rotation, and each meat formula has different additional ingredients to ensure balance. Their mineral and oil supplementation is customized for each meat. Formulas range from 80%- 84% meat inclusion (16%-20% vegetable). *Uses bacteriophages to protect against pathogenic bacteria.*

Answers

This food features fermented ingredients that provide a wide array of beneficial bacteria, which naturally protect the food against pathogenic bacteria while also providing benefits to the body. *Detailed* formulas are nutritionally complete with 90% animal ingredients, while *Straight* formulas (which only contain muscle, organ, bone, raw cultured goat whey, and sea salt) provide room to customize or add to other foods. Meats are pasture-raised, veggies (in dog formulas) are organic.

Wild Instincts

Locally made in San Diego, it includes GreenTripe.com's *Xkaliber* (described on the next page). This, along with goat kefir, raw honey, and other thoughtful ingredients makes it a unique formula. Available in Beef and Chicken formulas with about 15% organic vegetables.

The Bones & Co.

Made in a human-grade facility in Austin, TX this brand uses a “keto” philosophy to design their diet which is 95% human-grade meat/organ/bone and 5% organic produce and whole food supplements.

Halshan

Locally made in San Diego County. Offers options to assist home diet formulations and other customizing. Read ingredients carefully to be sure that you are providing a balanced diet over time (use a weekly menu, for instance). Please ask for assistance if you are unsure how to do this. Vegetables are 20%, and vary between meats. Synergy Formulas include muscle, organs, and vegetables, requiring the addition of calcium. Prime Selection formulas include calcium along with organs and veggies, making them a basic complete diet (we recommend additional supplementation if used exclusively).

Primal

Formula Patties & Nuggets - Meets complete nutrition guidelines. Uses organic vegetables and minerals and unrefined vitamins. Dog varieties contain 11-20% vegetables depending on variety. Cat varieties contain 5% vegetables. *Uses High Pressure Processing (HPP) in their poultry products to protect against pathogenic bacteria.*

Savage Cat

A complete diet designed specifically for cats, based on their physiology as obligate carnivores. There are no veggies other than psyllium husk powder for fiber (to replace feathers and fur that would normally be consumed). Meats are all California sourced, chicken is organic (from Petaluma Poultry), and rabbit and lamb our sustainably raised and certified humane.

Lotus

A complete diet designed specifically for cats, based on their physiology as obligate carnivores. Emphasis is on meat-based nutrition with minor but highly nutritious plant ingredients with minimal supplementation needed. Meats are sourced in California & New Zealand. Egg-shell powder is used for calcium rather than ground bone.

Rawr

A complete diet designed specifically for cats, based on their physiology as obligate carnivores.. Made in California using only regionally sourced meats from farms specializing in sustainable natural practices. Only plant-based ingredients are psyllium husk powder for fiber (to replace feathers and fur that would normally be consumed), and small amounts of seaweed for thyroid health.

Green Tripe

We have 100% green tripe and Xkaliber: a blend of green tripe, muscle meat, heart, tongue, trachea, & bone. We also carry raw pancreas by special order for dogs with EPI. These are not nutritionally complete diets, but they are an excellent source of naturally occurring enzymes, probiotics, and EFAs, and are thus important additions to the diet. Tripe also makes a good convalescence food.
